EDUCATION

Master of Science in Computer Science <i>Georgia Institute of Technology</i>	Jan 2026 – Present <i>GPA: 4.0</i>
Bachelor of Science in Computer Science <i>Kennesaw State University</i>	Aug 2022 – Aug 2025 <i>GPA: 3.8</i>
Relevant Courses: Object-Oriented Programming I & II, Computer Systems, Algorithms, Programming Languages, Data Structures, Web Development, Artificial Intelligence, Software Testing, Computer Graphics	

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, SCSS, C#
Technologies: Angular, React, Spring Boot, Node.js, REST APIs, Docker, Kubernetes, Jenkins, CI/CD, Git, Linux
Tools: JIRA, Figma, Visual Studio Code

EXPERIENCE

Software Engineering Intern (<i>Angular 19, Java Spring Boot</i>) <i>Union Pacific</i>	May 2025 – May 2026 <i>Omaha, NE</i>
- Built and migrated critical web applications to Angular 19 with responsive design, enabling 8K+ field users to complete operations on mobile devices and supporting 1.5 million monthly requests. - Improved API response times by 35% by developing a RESTful microservice in Java Spring Boot, integrating 5 services and OracleDB queries across 3 business units. - Practiced Agile development in 2-week sprints using JIRA, occasionally serving as Scrum Master to facilitate standups and track deliverables.	
Undergraduate Research Assistant <i>Kennesaw State University</i>	Jan 2025 – May 2025 <i>Kennesaw, GA</i>
- Designed machine learning models for Emotional AI, analyzing user interaction data to classify behavioral and emotional patterns in human-AI teaming contexts. - Presented research findings at academic symposiums and technical workshops, communicating complex results to cross-functional audiences.	

PROJECTS

AI Genie Chatbot (<i>Angular, Node.js, PostgreSQL, OpenAI API, Web Scraping</i>)	
- Designed and built an AI-powered chatbot providing real-time technical support, issue troubleshooting, and automated CRM ticket generation for a live sponsor (DineNGo). - Implemented a full-stack architecture with a custom CMS and web scraping pipeline to dynamically update the chatbot knowledge base; validated via iterative stakeholder testing. - Deployed the system to the sponsor's development environment and validated functionality through iterative testing and company feedback.	
CardSync (<i>Java 17, Spring Boot, React, TypeScript, PostgreSQL, Plaid API, Docker</i>)	
- Built a full-stack financial aggregation platform that connects multiple bank accounts through the Plaid API and consolidates transaction data into a single dashboard for spending analysis. - Implemented secure authentication and authorization using JWT, Spring Security, and BCrypt, while encrypting Plaid access tokens before persistence in PostgreSQL. - Designed and tested RESTful endpoints following a layered Controller-Service-Repository architecture, with automated unit testing using JUnit 5 and Mockito.	
Power Grid Simulator (<i>React, Java, Spring Boot, REST APIs</i>)	
- Built a full-stack power grid simulation platform to manage utility infrastructure, monitor facility health, and simulate real-time disruption events. - Developed interactive dashboards and backend APIs for maintenance tracking, billing management, customer monitoring, and audit logging using React and Spring Boot. - Implemented simulation logic for autonomous gopher activity, infrastructure damage detection, and maintenance issue workflows across interconnected power facilities.
