EDUCATION

Kennesaw State University
Bachelor of Science in Computer Science

August 2022 - August 2025
GPA: 3.8/4.0

EXPERIENCE

Software Engineering Intern | *Angular 19, Java Spring Boot*
Union Pacific

May 2025 – May 2026
Omaha NE

- Migrated critical infrastructure webapps to **Angular 19** and implemented responsive design, enabling 8K+ field users to seamlessly complete operations on mobile devices and reliably support **1.5 million** monthly requests.
- Improved response times by **35%** by developing a **RESTful ESB2** API-driven **microservice** with **Swagger** bindings in **Java Spring Boot**, integrating 5 services and **OracleDB** queries across 3 business units.
- Practiced Agile development with 2-week sprints, leveraging **JIRA** for task management and progress tracking, and occasionally serving as Scrum Master to facilitate stand-ups.

Undergraduate Research Assistant
Kennesaw State University

Jan. 2025 – May 2025
Kennesaw GA

- Designed and developed **machine learning models** for Emotional AI, leveraging **user interaction data** to analyze **behavioral patterns** and support emotional state classification.
- Analyzed **system performance** by evaluating **user feedback** and interaction data, iteratively improving **human-AI teaming effectiveness**.
- Synthesized research findings and presented results at academic symposiums and technical workshops.

PROJECTS

AI Genie Chatbot | *Angular, Node.js, PostgreSQL, OpenAI API, Web scraping*

- Designed and developed an **AI-powered chatbot** for DineNGo to provide **real-time technical support**, troubleshoot user issues, and automate **CRM ticket generation**.
- Implemented a **full-stack architecture** using **Angular, Node.js, PostgreSQL**, and the **OpenAI API**, integrating a custom **CMS** and **web scraping pipeline** to automatically update the chatbot knowledge base.
- Deployed the system to the sponsor's development environment and validated functionality through **iterative testing** and **company feedback**.

Power Grid Simulator | *React, Java, Spring Boot, REST APIs*

- Built a **full-stack power grid simulation platform** to manage utility infrastructure, monitor facility health, and simulate **real-time disruption events**.
- Developed interactive dashboards and backend APIs for **maintenance tracking, billing management**, customer monitoring, and audit logging using **React** and **Spring Boot**.
- Implemented simulation logic for autonomous gopher activity, infrastructure damage detection, and maintenance issue workflows across interconnected power facilities.

Full-Stack Nutrient Tracking Application | *Java, Spring Boot, Angular, REST API, MySQL*

- Developed a full-stack nutrient tracking application using **Java, Spring Boot**, and **Angular** that enables users to log meals and track daily nutrient intake.
- Integrated the **FoodData Central API** to retrieve nutritional data and implemented a **MySQL database** for efficient storage and querying.
- Deployed and tested the application with **100+ users**, collecting **user feedback** and iterating on features to improve meal planning and support personal nutrition goals.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, SCSS, C#

Technologies: Angular, React, Spring Boot, Node.js, REST APIs, Docker, Kubernetes, Jenkins, CI/CD, Azure, Git, Linux

Tools: JIRA, Figma, Visual Studio Code
